

Versatile and stylish documents with **JRReporter**

When creating documents, quality, design and flexibility are important. JRReporter does not set you any limits, but supports you in creating a wide range of documents directly from JobRouter.

By supporting all common document formats and numerous image formats, JRReporter offers the flexibility expected in modern companies. The integration of numerous diagrams and images, the generation of barcodes as well as access to almost any data source will give your documents a professional touch. In addition, there are precise positioning, rule-based formatting, calculations and other useful functions. Additional PDF functions support you in handling existing documents.

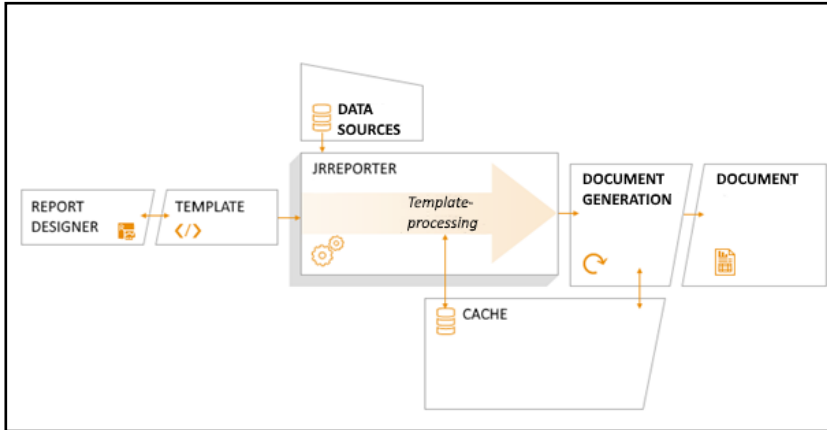

Due to the close integration into JobRouter, documents generated in the process can be used immediately as attachments.

GOOD PROCESSES START WITH GREAT ADDONS.

JR-AddOns - The care series for your JobRouter!

Essential features

- Modern reporting engine for flexible document generation
- Professional document template designer with preview function
- Live generation of documents in JobRouter dialogs
- System activity for easy integration into operations
- Return of generated documents to the current incident
- Usable with JobRouter Entry, does not count towards its restrictions

Schematic functionality of the JRReporter

Available documenttypes	PDF, Word, Excel, Powerpoint, RichText, Image (JPG, PNG, GIF, BMP, TIFF)
Visual data elements	Tables (table, cross table, list), diagrams (Variations of bars, columns, areas, lines, cakes, scatter and radar), maps (landscapes, choropleth), barcodes (codabar, code 11, code 25 standard), Code25 Interleaved, Code39, Code39 Extended, Code93, Code 93 Extended, Code128, CodeMSi, CodeMSi, EAN8, EAN13, EAN128, Postnet, UPCA, UPCE, QRCode, PDF417 u.a.), Graphics, Forms, Checkboxes, Text, HTML-Text
Positioning	Free positioning of all elements (accuracy 10 microns)
Formatting	Each element can be formatted in detail. Rule-based formatting (similar to Excel) is possible.
Formulas and computations	Comprehensive set of formulas included, additionally user-defined functions can be created.
Data sources	Any data source can be connected (MSSQL, ORACLE, mySQL, ODBC etc.)
Additional PDF features	Merging (merging of any individual documents), application of watermarks (graphics, text)

Flexible data usage

The data used in the document templates is selected in the Report Designer. This gives you a preview function with real data. Another advantage is that you can connect to almost any external data source without having to keep all the data necessary for the process flow in JobRouter. The data is formatted according to your specifications when the document is generated. For example, additional data for diagrams can be integrated and allows professionally designed documents.

By the way...

JRReporter also works without JobRouter. Whether in combination with DocuWare or any other application, the template definition is done as usual with the report designer. You then use the template you created by writing a corresponding request to the database table of JRReporter using SQL. A detailed description of how to use JRReporter without JobRouter can be found in the manual.

Do you already know our complete care series?
