

Check business records with **JRValidator**

Many business processes require data validation. Partly because it is legally required, partly because it makes sense to check certain information again.

With JRValidator you now have a comfortable support, which enables you to easily integrate necessary checks into your processes with the provided system activity.

The first version of the JR-AddOn, which is designed for continuous expansion, initially offers the legally required verification of the VAT ID and the verification of account information in IBAN format.

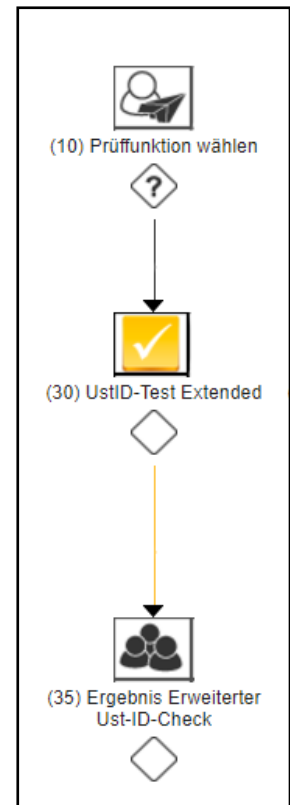

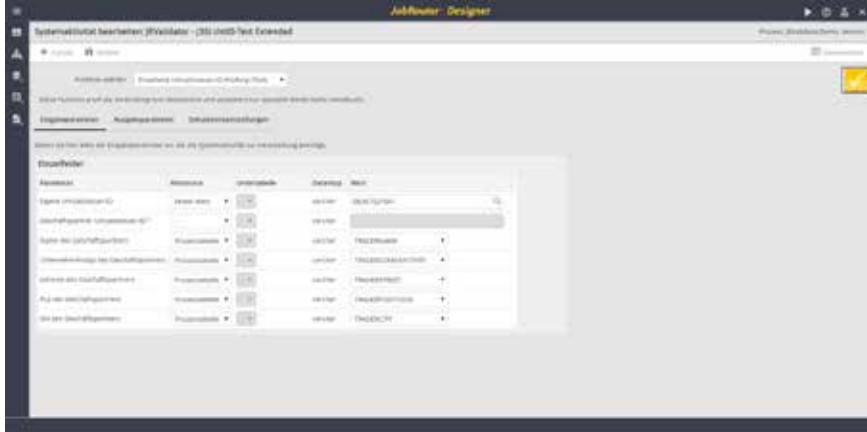

When the VAT ID is checked, the prescribed proof of the check is returned so that you have it available when required.

GOOD PROCESSES START WITH GREAT ADDONS.

JR-AddOns - The care series for your JobRouter!

Essential features

- Simple VAT ID check of EU countries
- Qualified VAT ID check of the EU countries with proof of VAT registration
- Check of International Bank Account Numbers (IBAN)
